

Mirapoint RazorSafe™

RS100, RS370

MIRAPOINT DELIVERS PROVEN, APPLIANCE-BASED SOLUTIONS WITH CARRIER GRADE RELIABILITY TO BUILD A SECURE MESSAGING INFRASTRUCTURE WITH CENTRALIZED CONTROL AND SIMPLIFIED MANAGEMENT – ALL AT A DRAMATICALLY LOWER COST.

PRODUCT DATA SHEET

- Simple appliance approach to email archival allows plug-and-play deployment
- All storage hardware, software and operating system in a single 1U or 2U chassis
- Simple POP or IMAP interface to the journal mailbox(es) allows the archival system to work in the background without disrupting email system performance
- Simple web-based user and search interface for all functions make the RazorSafe easy-to-use and secure
- External tape library system sold separately (strongly recommended)

The Email Archival Challenge

If eDiscovery needs, legal compliance or corporate governance policies compel your organization to preserve all email messages, you may spend hundreds of thousands of dollars or more on archival software, servers and the storage necessary to retain all of the email messages, often including messages containing spam or other unwanted content. Faced with the significant potential costs of email archival, some businesses adopt the dubious policy of purging all email beyond a certain date, putting the organization at even greater risk.

Mirapoint has made email archiving an order of magnitude easier and more cost-effective with the RazorSafe email archiving appliance. The RazorSafe appliance includes everything you need to archive your email including the application software, server hardware and storage system in one easy-to-deploy system.

The Mirapoint RazorSafe Appliance

The RazorSafe archiving appliance from Mirapoint passively and discretely copies all messages sent or received within an organization, indexes the messages and places them into a permanent archive. For even greater redundancy, the message archive can be backed up securely to tape and then deleted from the originating journal mailbox.

Mirapoint's policy-driven email archival approach allows administrators to selectively group messages by division or department, sender and receiver, and external or internal messages. In addition, Mirapoint's complementary anti-spam and anti-virus technology can be used to greatly reduce the number of messages indexed by blocking these messages on the edge of the network. The entire archival and search process can be conducted securely without alerting or disrupting users. The RazorSafe's high-speed search capabilities allow reviewers to discover messages based on sender, recipient, subject, keyword and date range. Marked messages can then be securely exported in the common *.eml format. The archive message base is not modifiable, and all actions by administrators or by the RazorSafe itself are recorded in a secure audit log, thereby meeting stringent compliance requirements.

Mirapoint RazorSafe™

How the Mirapoint RazorSafe Solution Works

Special archival journal interfaces are activated on the Mirapoint RazorGate® and/or Mirapoint Message Server®. A variety of filters can be applied to these interfaces to journal only specific types of messages or to place messages with differing content or headers into different secure folder locations.

One or more RazorSafe appliances log into these journal folders at a pre-set interval and collect the messages for indexing and storage. Messages indexed and stored in the archival message base can be automatically backed up to tape at regular intervals (typically nightly). Messages on the tape are secured using private 256-bit encryption. Once the messages are indexed and archived to tape, the original messages are deleted from the archival folder, completing the archival process.

Features and Benefits

Single box solution for email archiving

RazorSafe combines all of the hardware and software you need for a plug-and-play archival solution into a single appliance. Competitive solutions require you to piece together a solution by buying server hardware, storage, software and operating system separately.

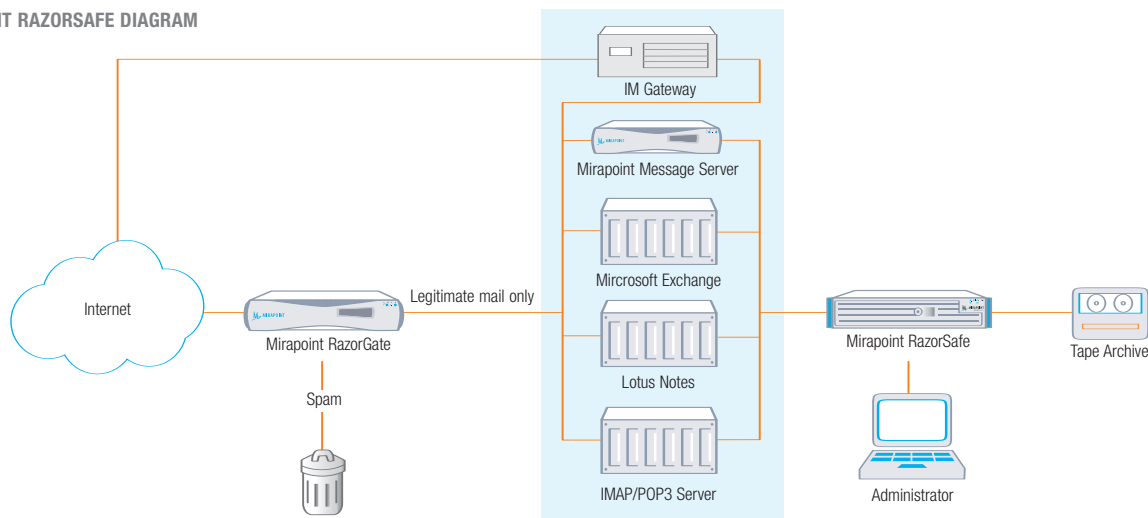

Multi-platform compatibility

RazorSafe works with all leading mail platforms including Mirapoint Message Server, Microsoft Exchange, IBM/Lotus Notes, as well as POP3/IMAP mail servers.

Cost effective archiving

RazorSafe is the industry's most cost-effective archiving solution, saving thousands of dollars over competing products and services.

MIRAPOINT RAZORSAFE DIAGRAM

SPECIFICATIONS	RS100	RS370
Processor	Single Pentium 4, 3.0 GHz	Two Dual Core 2.0 GHz CPU Intel Xeon™ Processors
Memory	1 GB ECC DDR RAM	4 GB ECC DDR SDRAM
Networking	Dual integrated 1 Gb/s Ethernet	Dual integrated 1 Gb/s Ethernet
Storage Capacity	1 Terabyte SATA	3.7 Terabyte RAID5 SATA
Tape Interface	U160 SCSI Interface (LVD)	U160 SCSI Interface (LVD)
Form Factor	1 Rack Unit; 19 inch rack including mounting rails	2 Rack Unit; 19 inch rack including mounting rails
Regulations	RoHS, FCC Class A, UL, BSMI, VCCI	
Messaging Platforms	Mirapoint Message Server, Microsoft Exchange, IBM/Lotus, POP3/IMAP	
WARRANTY	Hardware: 1 year warranty Software: 90 day warranty includes email only support and updates Support: Annual contracts offered for 9x5 or 24x7 support including software updates
